Biogenic Organotrophic Wetsuits

W

bowproject.eu

This project has received funding from the FET Proactive programme under grant agreement N° 952183

BOW

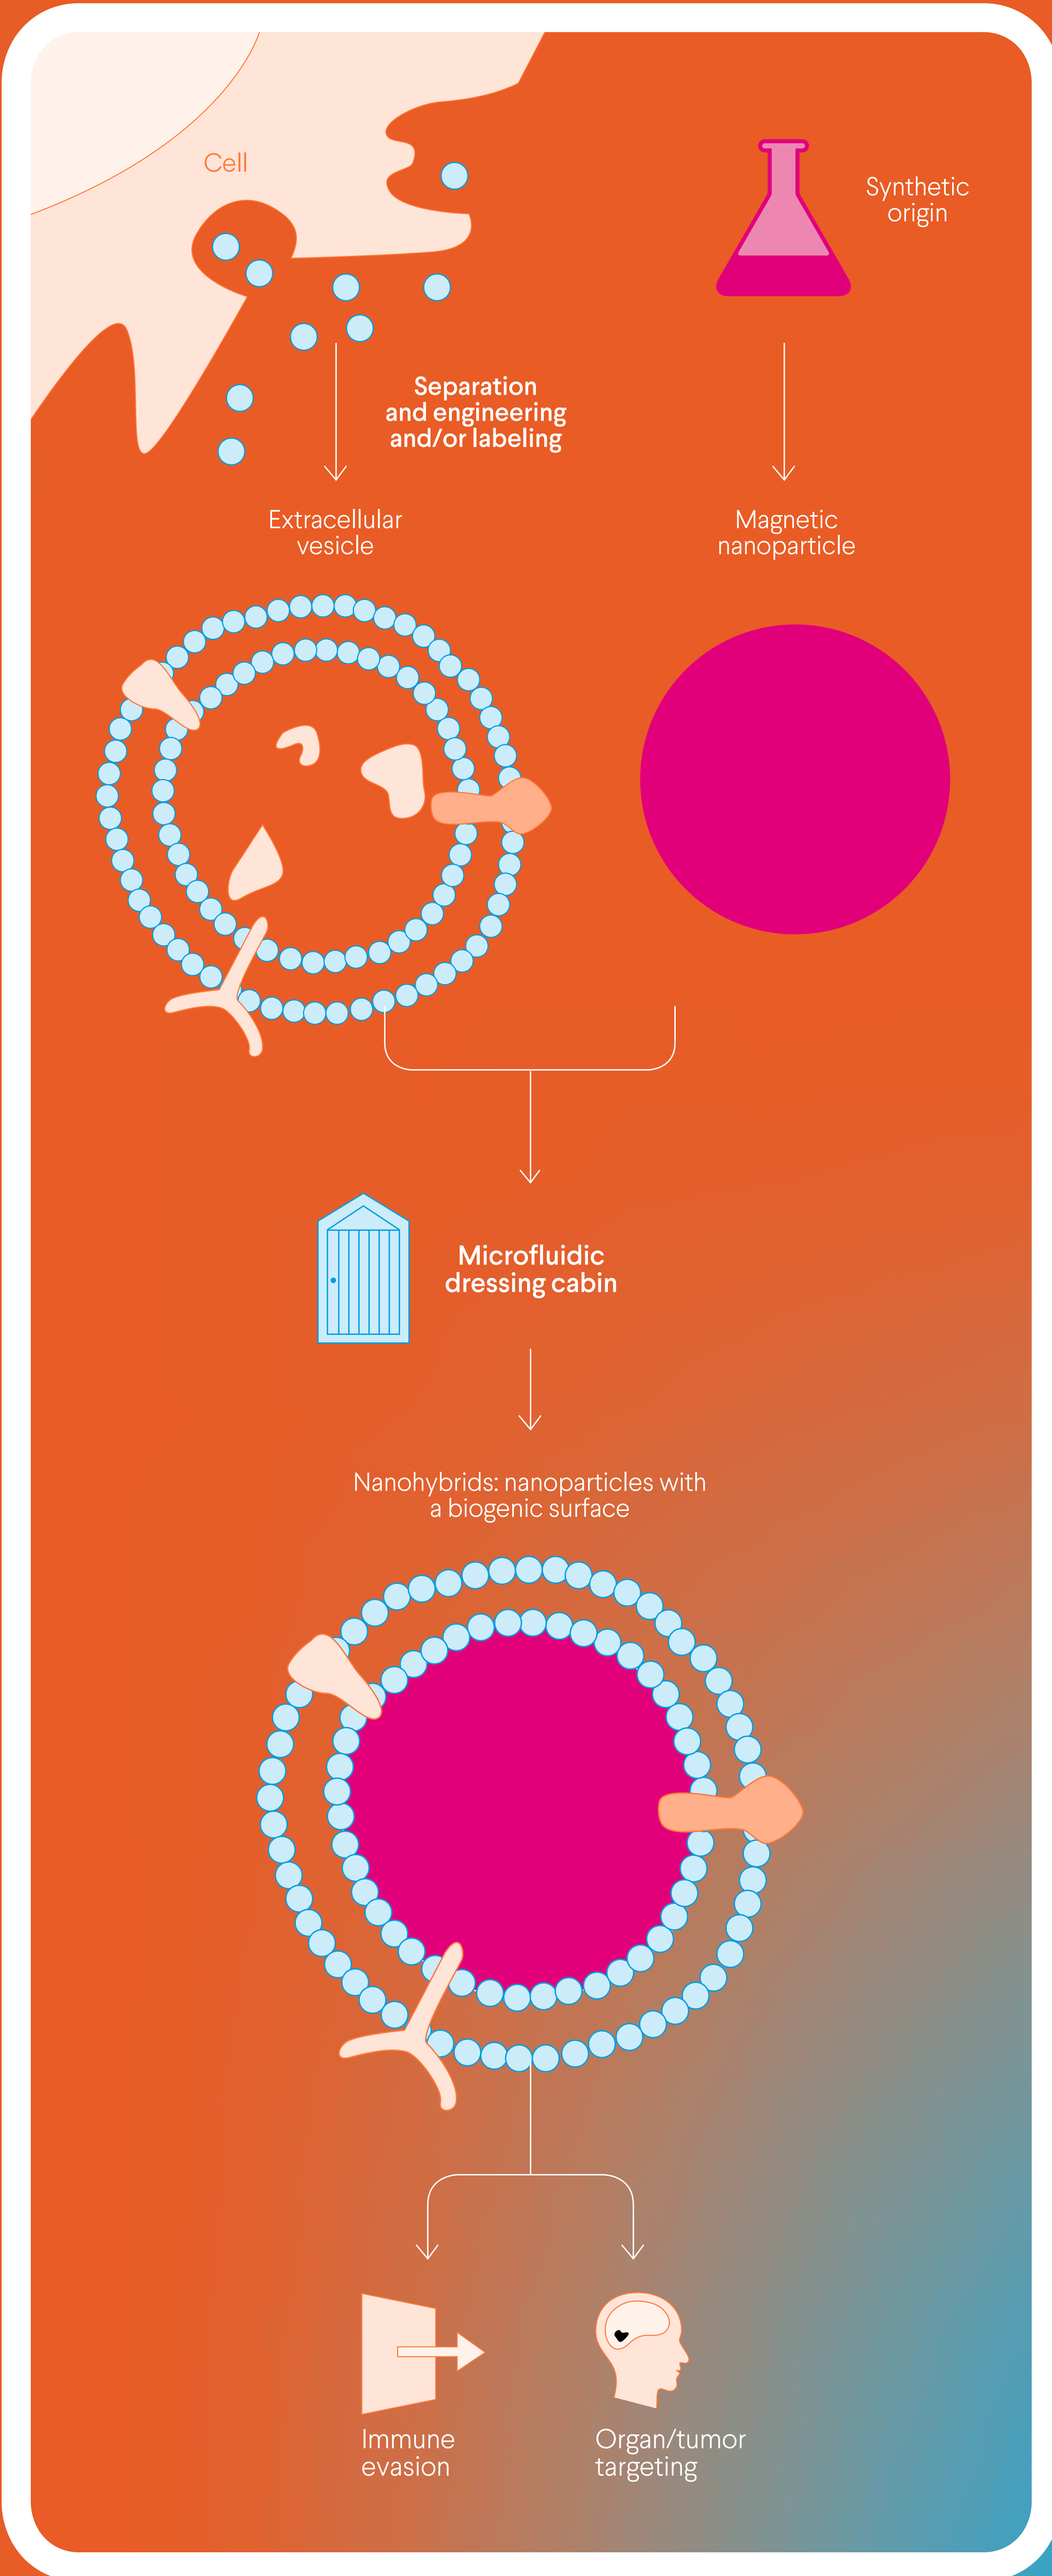

The main objective of BOW is to create hybrid magnetic nanoparticles with a membrane surface made from an extracellular vesicle

bowproject.eu

This project has received funding from the FET Proactive programme under grant agreement N° 952183

B

W

BOW will set a general and viable paradigm for synthetic nanodevices with a biogenic surface
